

I'll keep this simple. With so many businesses having to shut their door, unemployment has jumped a staggering amount (nearly double), and unfortunately its set to jump again in 2021. So we thought, what could we possibly do that no one else is doing that will help these people, even just a little bit.

Chances are you, or someone you know has a laptop that used to work but no longer does, with a software related problem, or maybe you have an old laptop that has windows on it, and it works, but its impossibly slow.

What we'll do is take that laptop off you, either fix the windows issue you have or rebuild windows entirely for you. Or, if the problem is that windows works, it's just real slow, then instead we will give it a complete makeover.

Installing an entirely different operating system, one that gives you the same ability to browse, get email and comes with a free office software package, but one that will cost you nothing to use and will run faster on older laptops.

Windows Fix/Rebuild Option

Your laptop wont boot into windows, just keeps throwing up an error and you haven't a clue how to fix it.

We will take it, and either fix it or wipe it and re-install windows from scratch for you. You get your laptop back in working condition.

Laptop Makeover Option

You might have an old laptop sitting in a cupboard, had some version of windows, and it still works but its just too slow.

We will install Mint Linux onto it. Linux is an entirely free Operating system, that comes bundled, like windows, with software. Its easy to use, and runs well on older computers.

What do you need to do next?

Oxford Innovation have kindly offered the use of their 25+ Innovation Centres across Great Britain as drop off points for your Laptops.

Oxford Innovation are experts in supporting the growth of early stage and start up businesses.
